^{* - 5-} and 7-day forecasts are based on temperature (inside- and outside-canopy measurements), precipitation, and leaf wetness which are powered by the Semios® precision farming platform.

Note: In this updated table, the order of some regions was changed from previous reports to match the RADAR on-line report and to minimize errors in the summary table.

Industry Advisory - Summary for Selected Almond Growing Regions

For the coming week, zero risk is forecasted for Alternaria leaf spot, anthracnose, and bacterial spot in all regions (Table 1).

Overall, the forecasts are subjected to the amount and duration of precipitation (leading to leaf wetness) and realized temperatures. Forecasted temperatures are remaining relatively cool to moderately warm (18.6 to 34.7C) in all regions for the next week. Forecasted precipitation is also zero for the coming week, indicating that the overall disease pressure will be low for almond growing regions of the state (Table 2).

The website https://www.ag-radar.com (password: Almondboard2022) displays actual and forecasted disease risk assessments for each region. Because these are regional forecasts, precipitation may vary with region and differ for the forecasted rainfall. Please check https://www.ag-radar.com for up to date daily forecasts. Historical records and experience for specific locations should be considered. This advisory will be updated weekly.

"2022 Fungicide Efficacy Tables" were posted at http://ipm.ucanr.edu/PDF/PMG/fungicideefficacytiming.pdf on 3-21-22 and at https://cfn-fungicides.ucr.edu/efficacy-tables on 5-1-22.

Note: Maps for all regions listed in Tables 1 and 2 are provided in Figs. 1 to 3.

^{^ -} Numerical risk is scaled as follows: 0 = no risk, 1 = action threshold (Note: values may exceed 1 due to hourly accumulations).

Table 2. Forecasted weather for Thursday, May 19 through Wednesday, May 25, 2022*

No.	County	Region	Date	Avg Temp (in canopy) °C	Avg Humidity (%)	Precip. (mm)	Leaf Wetness (hours/day)
1	Butte	West	5-19 to 5-25	23.5 to 34.7	17.1 to 30.0	0	0
2	Colusa	East	5-19 to 5-25	22.8 to 32.8	18 to 33.7	0	0

11	Stanislaus	Central	5-19 to 5-25	20.9 to 28.4	24.1 to 37.5	0	0
12	Stanislaus	East	5-19 to 5-25	21.1 to 28.2	26.1 to 45.7	0	0 for most days, 1 h for 5-20 and 2 h for 5-22
13	Stanislaus	West	5-19 to 5-25	21.4 to 29.4	19.3 to 34.9	0	0

Note: In this table, the order of regions is the same as Table 1 and was generated using the RADAR on-line forecasted report powered by the Semios[®] precision farming platform. The ranges of average temperatures, relative humidity values, precipitation, and leaf wetness are not sequential with dates, but the high and low values are within the forecasted week.
